

SRIRAM M

+91 9677207948 | Chennai, Tamil Nadu, India

Sriram1326.io@gmail.com | www.linkedin.com/in/sriramio

EDUCATION

SRM Institute of Science and Technology — Chennai, India

Bachelor of Commerce (B.Com), Information Systems Management | 2021 – 2023

Relevant Coursework: Principles of Management (NPTEL), SPSS (IBM)

SBOA Matriculation and Higher Secondary School — Chennai, Tamil Nadu

Higher Secondary Education | 2020 – 2021

Studied Accounting, Economics, Commerce, and Business Mathematics.

SKILLS

Programming Languages: Python

Python Libraries & Frameworks: Pandas, NumPy, Matplotlib, Flask, FastAPI, WebSockets, ZeroMQ

Backend & APIs: REST APIs, API Integration, Real-Time Data Processing, Event-Driven Architecture

AI / LLM Engineering: Large Language Models (LLMs), LangChain, RAG Pipelines, Prompt Engineering, AI Chatbots

Speech & Audio Processing: Speech-to-Text (STT), Audio Analytics, GroqAI, Deepgram, Voice AI Pipelines

Data Analytics & Visualization: Power BI, Tableau, Data Analysis, Interactive Dashboards, Data Visualization

Microsoft Office Suite: Microsoft Excel (Pivot Tables, VLOOKUP), PowerPoint, Word

Soft Skills: Problem Solving, Effective Communication, Collaboration, Documentation, Requirement Analysis, Report Presentation, Deadline Management

PROJECT

NanoProfitsAI | Fully Automated Algo Trading Platform

Problem: Manual options trading lacks execution speed, disciplined risk management, and real-time multi-instrument monitoring during volatile market conditions.

Role: Designed and developed a low-latency, event-driven algorithmic trading platform for automated options execution and real-time analytics.

Technologies Used: Python, Flask, WebSockets, REST APIs, Pandas, NumPy, ZeroMQ, VWAP, ATR, SuperTrend, Parabolic SAR

Key Contributions & Result:

- Built a tick-level indicator engine processing live market data with sub-100ms execution latency.
- Developed multi-timeframe VWAP mean-reversion and pullback strategies for real-time signal generation.
- Engineered concurrent monitoring and execution for 10+ option contracts with dynamic ATM strike selection.
- Implemented ATR-based stop-loss, structural exits, and kill-switch risk controls to reduce drawdowns.
- Created real-time dashboards for P&L, latency, and system health monitoring, achieving 99.9% uptime.

MinnalMoney | Real-Time Options Scalping Terminal

Problem: Retail traders face delayed execution, unstable broker sessions, and lack of real-time analytics during high-volatility trading.

Role: Developed and scaled a real-time options scalping terminal focused on low-latency execution, session reliability, and live risk analytics.

Technologies Used: Python, Flask, WebSockets, Server-Sent Events (SSE), REST APIs, Pandas

Key Contributions & Result:

- Built a low-latency trading terminal handling 100+ concurrent live tick streams with sub-second execution.
- Developed a fault-tolerant broker abstraction and auto-session recovery system, improving trading-session availability to 99.9%.
- Modularized backend architecture into 6+ Blueprint service modules for improved maintainability and faster feature deployment.
- Implemented live MTM, P&L, strike-selection, and order-book dashboards for faster trader decision-making.
- Added VWAP, ATR, SuperTrend, auto SL/Target square-off pipelines to strengthen execution discipline and risk management.

Thedal | Universal Website-Aware RAG Chatbot with Voice

Problem: Traditional chatbots struggle to provide contextual, website-specific answers and lack reliable voice interaction capabilities.

Role: Built a full-stack enterprise-grade RAG chatbot with real-time website crawling, contextual retrieval, and voice-enabled AI interactions.

Technologies Used: FastAPI, LangChain, HuggingFace, React, FAISS, Groq Whisper-v3, Deepgram, Llama Models

Key Contributions & Result:

- Developed a plug-and-play RAG architecture with real-time website crawling and contextual embedding pipelines.
- Designed a multi-model fallback system using Llama 70B, Nemotron, Qwen, and Llama 8B for high availability and reliability.
- Implemented persistent FAISS indexing and auto-retry mechanisms to reduce downtime and improve response latency.
- Built voice-enabled AI interactions using Whisper-v3 for Speech-to-Text and Deepgram for natural Text-to-Speech communication.
- Delivered a scalable full-stack chatbot platform capable of handling contextual queries across multiple websites.

UVFarms Official Website | Production-Ready Agri-Tech Platform

Problem: UVFarms required a scalable and modern digital platform to represent multiple agri-tech verticals with responsive user experience and strong performance.

Role: Frontend & Full-Stack Developer

Technologies Used: Next.js, React, Responsive Design, Prompt Engineering, Gemini CLI (Antigravity)

Result:

- Developed and deployed the official UVFarms website with scalable architecture supporting 9 agri-tech verticals.
- Built responsive and SEO-friendly interfaces optimized for desktop, tablet, and mobile devices.
- Designed modular frontend architecture for faster scalability and maintainability.
- Successfully launched the live production website: uvfarms.in

EXPERIENCE

Algorithmic Trading Developer | [UVFarms](https://uvfarms.in)

Dec 2024 –

Present

Greater Chennai Area | Remote

- Started as a trainee focused on financial markets, derivatives trading, and quantitative strategy development before transitioning into automated trading systems engineering.
- Engineered a low-latency Python trading framework processing real-time WebSocket market data for NIFTY and SENSEX derivatives with sub-100ms execution performance.
- Designed and deployed 6+ algorithmic trading strategies using VWAP, SuperTrend, ATR, CPR, and Parabolic SAR across multi-timeframe execution models.
- Automated live trade execution using Dhan and Flattrade broker APIs, reducing manual intervention by 95% and improving execution reliability.
- Built real-time monitoring systems for P&L tracking, drawdown analysis, and automated risk alerts.
- Developed a structured backtesting and analytics framework for historical validation, performance benchmarking, and strategy optimization.
- Contributed to the development of the official UVFarms website, supporting the company's digital and product presence.
