

PROFILE

Results-driven Full-Stack & Algorithmic Trading Developer specializing in high-concurrency fintech, quantitative trading, applied AI, and enterprise SaaS. Experienced in building low-latency trading engines, production RAG pipelines, and scalable architectures using Python, FastAPI, WebSockets, PostgreSQL, and Next.js.

Backend Engineering | Algorithmic Trading | Real-Time WebSockets & APIs | Event-Driven Architecture | RAG & LLMs | Full-Stack Development | PostgreSQL | Quantitative Risk Controls

WORK EXPERIENCE

UVFarms | Algorithmic Trading Developer & Full-Stack Engineer (Remote) Dec 2024 – Present

- Engineered low-latency trading infrastructure:** Built Python-based systems processing real-time market data for NIFTY and SENSEX derivatives, integrating DhanHQ and Flattrade REST/WebSocket APIs for market-data ingestion, signal generation, order execution, and position management.
- Designed and validated quantitative strategies:** Deployed **6+ strategies** using VWAP, SuperTrend, Parabolic SAR, CPR, and ATR, evaluating performance using historical tick data, win rate, Sharpe ratio, and maximum drawdown.
- Implemented risk and reliability controls:** Developed automated trailing stop-losses, ATR-based exits, automated square-offs, P&L/MTM monitoring, emergency kill-switches, and broker-session recovery.
- Architected enterprise B2B applications:** Developed a multi-portal wholesale ecosystem using **FastAPI, SQLAlchemy, and PostgreSQL** with loyalty workflows, GPS attendance, QR validation, JWT authentication, and RBAC.
- Built production RAG & Voice AI applications:** Developed AI assistants using **LangChain, FAISS, Llama, Whisper, and Deepgram** for website crawling, contextual retrieval, model fallback, STT, and TTS.

PROJECTS

Enterprise B2B ERP | Wholesale ERP & Loyalty Platform Jun 2026 – Jul 2026

FastAPI · PostgreSQL · SQLAlchemy · Next.js · React · PWA · Docker · JWT · REST APIs

- Architected a centralized backend (FastAPI, PostgreSQL, SQLAlchemy) powering Admin, Sales Representative, and Buyer portals.
- Developed a customizable loyalty engine featuring **tiered reward rules, cashback calculations, SKU-level tagging, and transaction ledgering**.
- Implemented secure JWT authentication with fine-grained **Role-Based Access Control (RBAC)** across all application portals.
- Built field-sales automation incorporating **GPS geofencing, QR merchant validation, and offline-ready PWA sync**.

Thedal | Website-Aware RAG Chatbot with Voice AI Apr 2026

FastAPI · LangChain · FAISS · React · Hugging Face · Llama · Whisper · Deepgram

- Built a full-stack RAG system with automated website crawling, text chunking, vector embedding generation, and contextual retrieval.
- Designed a **multi-model fallback architecture** (Llama → Nemotron → Qwen) to guarantee response availability and handle API rate limits.
- Configured persistent **FAISS vector indexing** with similarity search and automated retry mechanisms for grounded responses.
- Integrated speech-to-text (**Whisper**) and text-to-speech (**Deepgram**) pipelines for real-time voice conversations.

MinnalMoney | Real-Time Options Scalping Terminal Mar 2026 – Apr 2026

Python · Flask · WebSockets · SSE · REST APIs · Pandas

- Built a high-frequency options scalping terminal supporting **100+ concurrent tick streams** via Server-Sent Events (SSE) and WebSockets.
- Developed **automatic broker session recovery** and token refresh workflows, ensuring uninterrupted trading-session availability during volatile hours (**99.9% uptime**).
- Modularized the backend into **6+ service modules**, isolating data ingestion, indicator computation, and order management.
- Implemented live order-book depth tracking, order execution monitoring, and real-time MTM P&L calculations.

NanoProfitsAI | Automated Algorithmic Options Trading Platform Apr 2025 – Feb 2026

Python · Flask · WebSockets · REST APIs · Pandas · NumPy · ZeroMQ

- Built an event-driven tick processing engine utilizing **ZeroMQ and WebSockets** for automated signal generation under **sub-100ms latency**.
- Engineered concurrent strategy monitoring across **10+ option contracts** featuring real-time ATM strike selection and dynamic delta alignment.
- Integrated automated risk workflows covering stop-losses, structural exits, trailing targets, and emergency kill-switches.
- Built real-time system health and execution analytics dashboards, achieving **99.9% trading uptime**.

TECHNICAL SKILLS

Languages:	Python, SQL, JavaScript, TypeScript	AI & LLM:	LangChain, RAG, FAISS, LLMs, Prompt Engineering, Whisper, Deepgram
Backend:	FastAPI, Flask, REST APIs, WebSockets, SQLAlchemy, ZeroMQ	Data Analytics:	Pandas, NumPy, Excel, Power BI, Tableau, Matplotlib
Frontend:	React, Next.js, Tailwind CSS	Trading:	Algorithmic Trading, Backtesting, VWAP, ATR, SuperTrend, Risk Management
Databases & Tools:	PostgreSQL, SQLite, Redis, Docker, Git		

EDUCATION & CERTIFICATIONS

Bachelor of Commerce (B.Com) – Information Systems Management 2021 – 2023

SRM Institute of Science and Technology, Chennai | Grade: 7.83 | Coursework: Principles of Management (NPTEL) · SPSS Analytics (IBM)

Certifications: Advanced Excel · SQL Basics (HackerRank) · Accenture Data Analytics · Tata Group Data Analytics · Deloitte Australia Technology
